## PROLOGUE FROM MEDICC

Necessity is the mother of invention, as the wise old saying goes. But to explain the genesis of this glossary, we would have to add that collaboration is the mother of success. In our case, this means first of all the inspiration derived from Cuba's cooperation in the health field with Haiti, the Americas' poorest country, and from the over 1,000 young Haitians who decided to study medicine in Cuba to put their knowledge and their skills at the service of their people.

This glossary was initiated by Dr. Hilda María Pérez Núñez and Xiomara Díaz Torres of the Higher Institute of Medical Sciences of Santiago de Cuba, the result of their experience as teachers during a period of the Cuban medical team's collaboration in Haiti. Over time, the team's health professionals have worked in all ten departments of Haiti, carrying out 13,799,075 patient consults between 1998 and 2008. The nearly 400 Cubans who serve in Haiti's most remote regions confront the same linguistic problem that later face the Haitian graduates: they studied medicine in Spanish, but need to communicate with their patients in Creole and write their clinical histories in French, as is the practice in Haiti.

The first 750 words were put to paper, thanks to the ideas and perseverance of these two professors. The glossary would finally grow to over 4,000 words as a result of the dedication of a group of collaborators from Cuba, the United States, Canada and Haiti. The second phase of the book was coordinated by Anna Kovac, trilingual Canadian journalist living in Cuba, under the direction of Gail Reed, Executive Editor of the MEDICC Review journal.

For nearly two years, the following persons contributed their efforts to the project, and merit special recognition:

\* Alyana André, Canadian, who translated the lion's share of the glossary into the three languages.

\* Dr. José Díaz Novas of the Cuban Ministry of Public Health, whose work identified over 3,000 words, essential primary health care vocabulary.

- \* Lisette Dolyres, Haitian, who drew on her vast medical experience in Canada, Haiti and Africa to revise the Creole.
- \* Ginette Edouard Calonges, Haitian, who worked on the translation of the first part of the glossary.
- \* Reynaldo Henquén, Cuban journalist in Radio Havana Cuba's French Department, who revised the French.
- \* Dr. Minerva Nogueira Sotolongo, professor of the National School of Public Health in Havana, who reviewed the Spanish terminology.
- \* Loida Oliva Urbay, resident in Haiti, who worked on the translation of the first part of the glossary.

We are also grateful to Dr. Antonio López Gutiérrez, Rector of the Higher Institute of Medical Sciences of Santiago de Cuba and the school's professors dedicated to the Haitian students' medical training; Dr. Yiliam Jiménez Expósito, Viceminister of Foreign Relations of Cuba; Dr. Nestor Marimón Torres, Director of International Relations, Ministry of Public Health of Cuba (MINSAP); Dr. Juan J. Ceballos Arrieta, Viceministry for Teaching and Research, MINSAP; Sisleidys Lantigua Pomo; and graphic designer Aram Álvarez Bernal, MFA.

Like all works that come to light for the first time, this one can certainly be improved. Thus, we invite you to join our collective, welcoming your suggestions and corrections. It is our wish, above all, that this glossary be useful to all those committed to Health for All.

## HESPERIAN INTRODUCTION

Hesperian is pleased to collaborate with Medical Education Cooperation with Cuba (MEDICC) in adding a fourth language — English — to the Health For All Medical Glossary, originally published by MEDICC Review in Spanish, French and Kreyòl. Developed for the Haitian graduates of Cuba's Latin American Medical School; the glossary assists these committed young doctors on their return to Haiti — since they learned medicine in Spanish, speak with their patients in Kreyòl and compose clinical records in French.

On January 25, 2010 Hesperian received a call from MEDICC, requesting assistance in adding a fourth language — English — to the 4000+ word glossary. This urgent request was in response to the many English-speaking health care workers in or on their way to Haiti following the devastating earthquake. The authoritative glossary contains terms and expressions commonly used by health care providers, contributing to better care and preventive medicine efforts by multinational teams.

Hesperian thanks the staff and volunteers who immediately transformed MEDICC's original into an editable “wiki” format, and sent an email alert to recruit volunteers — professional translators, doctors, and fluent English/ Spanish speakers. Twenty-eight volunteers from Berkeley to Germany worked around the clock to meet a 30-hour deadline. Their work was then reviewed by another team of medical translators and also by Haitian MDs and MEDICC's editor to ensure the Kreyòl matched the English. More than 80 volunteers participated in this week-long intensive project of solidarity with the people of Haiti.
